

---

**Role: Senior Software Engineer**

---

**Profile Background:**

- **Design and Development:** Develop and maintain backend systems and APIs using **Spring Boot**, **Spring MVC**, and **Spring Data**.
- **Microservices Architecture:** Build and maintain scalable, resilient, and high-performance microservices using **Eureka Server** and other related technologies.
- **API Design:** Design and implement **RESTful** APIs and integrate with third-party services.
- **Database Management:** Work with relational databases, including **MySQL**, **PostgreSQL**. Use **JPA** and **Hibernate** for ORM-based data access.
- **Security Implementation:** Implement **Spring Security** for securing applications using OAuth, JWT, and other security protocols.
- **DevOps & CI/CD:** Work with DevOps tools (e.g., **Git**, **GitHub**, **Bitbucket**) for continuous integration and deployment pipelines.
- **Collaborative Development:** Collaborate with product managers, front-end developers, and other team members to design and implement features.
- **Performance Tuning & Optimization:** Analyze application performance and make improvements for scalability and efficiency.
- **Documentation:** Write clear documentation for APIs, code, and processes.

**Summary of Career Path:**

**1. Junior/Entry-Level Developer**

- **Key Focus:** Learning the basics of Java, Spring Framework, and development best practices.
- **Responsibilities:**
  - Write and maintain code, primarily for small tasks or modules.
  - Work under the supervision of more experienced developers.
  - Learn about version control (Git), testing, and debugging.
  - Begin understanding databases (SQL) and ORM (e.g., Hibernate).
  - Familiarize with Spring Boot, REST APIs, and basic front-end integration.
  - Participate in team meetings.
- **Skill Development:**
  - Master core Java concepts, Spring Boot basics, and RESTful APIs.
  - Learn to work with databases and improve coding practices.

**2. Software Developer:**

- **Key Focus:** Building on core Java and Spring Boot expertise with more complex tasks.
- **Responsibilities:**

- Design and implement key features for the back end of applications.
- Handle database interactions, including optimizing queries.
- Develop and consume REST APIs and integrate with third-party services.
- Conduct code reviews and ensure code quality.
- Implement microservices using Eureka Server and deploy applications to cloud platforms (AWS, Azure using RDS, Git).
- Work with DevOps tools for Continuous Integration/Continuous Deployment (CI/CD).
- **Skill Development:**
  - Improve understanding of microservices, cloud deployment, and application security.
  - Learn more advanced frameworks and technologies (e.g., RabbitMQ, Azure IoT).
  - Start gaining leadership and mentoring experience.

#### **Key Contribution Area:**

- Backend Development
- RESTful API Design
- Coding Review
- API Documentation, Technical Documentation
- Cross-Functional Collaboration
- Mentoring and Knowledge Sharing
- Client Engagement

#### **Technology Competencies:**

- **Core Java:** OOP, Design Patterns
- **Spring Framework:** Spring MVC, Spring Boot
- **Database:** Relational (PostgreSQL, MySQL), ORM (Hibernate, JPA)
- **DevOps Tools:** Git, GitHub
- **Web Development:** RESTful Web Services, JSON
- **Cloud:** AWS, Azure
- **Microservices:** Microservices Architecture, API Gateway, Service Discovery
- **Version Control:** GitHub, Bitbucket
- **Other Tools:** RabbitMQ, Swagger API, Postman API, Logging, Angular

#### **Project Highlights:**

##### **Project 1: Ascendion TransUnion Global Data Catalog**

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Project Scope</b>            | <ul style="list-style-type: none"><li>The Ascendion TransUnion Global Data Catalog is an enterprise-grade data management and analytics platform developed by Ascendion in collaboration with TransUnion. It is designed to help organizations efficiently manage, catalog, and analyze vast amounts of data from various sources, ensuring data quality, accessibility, and compliance across global operations.</li></ul>                                                               |
| <b>Individual Role</b>          | Java Developer                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Tools &amp; Technologies</b> | Java, Vue JS, Postgres SQL, GCP, AWS.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Project Contribution</b>     | <ul style="list-style-type: none"><li>Participating in sprint planning and successfully completing Jira stories related to data ingestion, catalog updates, and UI improvements.</li><li>Collaborating with QA to support testing activities and resolve defects efficiently to ensure high-quality deliverables.</li><li>Supporting the team in testing and demo sessions to ensure smooth delivery and stakeholder satisfaction.</li><li>Worked on creating a CI/CD pipeline.</li></ul> |

### Project 2: Accumate

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Project Scope</b>            | <ul style="list-style-type: none"><li>This is a company product for Accounting Solutions. Though there are many Accounting Solutions in the market, Accumate is unparalleled in Scope, Simplicity and Security. Accumate is a next-gen Accounting Solution that gives you more Power and Flexibility to manage your company books.</li><li>Accumate offers the following functionalities with single-point convenience: 1. Accounting 2. Taxation (fully GST-ready) 3. Banking 4. Compliances 5. Reports Generation.</li></ul> |
| <b>Individual Role</b>          | Java Developer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Tools &amp; Technologies</b> | Java, Angular JS, Postgres SQL, iReport Designer and Bhash SMS API                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Project Contribution</b>     | <ul style="list-style-type: none"><li>Code quality improvements.</li><li>Fix the issues faced in using the system.</li><li>Worked on creating a CI/CD pipeline.</li></ul>                                                                                                                                                                                                                                                                                                                                                      |

### Project 3: ULIMI

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Project Scope</b>            | <ul style="list-style-type: none"> <li>The way we communicate has improved somehow. Thanks to many Intelligent assistants such as chatbots and voice-enabled devices like Alexa and Google Home that offer a unique, natural, and intuitive human-machine interaction.</li> <li>Advanced smart communication chatbots application to have better conversations. It also helps increase self-service engagement and automate user interactions.</li> </ul> |
| <b>Individual Role</b>          | Java Developer                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Tools &amp; Technologies</b> | Java Spring Boot, Postgres SQL, Swagger and Dialog flow                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Project Contribution</b>     | <ul style="list-style-type: none"> <li>Independently coordinated with team and client.</li> <li>Follow code reviews.</li> <li>Fix the issues faced in using the system.</li> </ul>                                                                                                                                                                                                                                                                        |

**Project 4: Click 360**

|                                 |                                                                                                                                                                                                                                                                                                         |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Project Scope</b>            | <ul style="list-style-type: none"> <li>This application is all about the tracking of the employee's performance in that organization.</li> <li>This app contains various modules which are essential for each office &amp; tracking their employees like goals, competencies, incidents etc.</li> </ul> |
| <b>Individual Role</b>          | Software Developer                                                                                                                                                                                                                                                                                      |
| <b>Tools &amp; Technologies</b> | Java Spring Boot, MySQL, Swagger, Eureka Server                                                                                                                                                                                                                                                         |
| <b>Project Contribution</b>     | <ul style="list-style-type: none"> <li>As a developer, I understand the requirements, developed Api for each requirement and consume these Api over the application.</li> <li>Independently coordinated and worked with teams from different cities.</li> </ul>                                         |

**Project 5: Invoice Management System**

|                      |                                                                                                                                                                                                                                                                                      |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Project Scope</b> | <ul style="list-style-type: none"> <li>This Microservice architecture application.</li> <li>IMS is a rapidly deployable and affordable SaaS model solution. The email contains an invoice as a pdf attachment which may be generated from the supplier's business system.</li> </ul> |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
